

PIXIE, U and INISSIA Blades – Technical Communication

15.01.2014

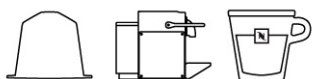

Pixie / U / Inissia Blades

Nespresso introduced new blades into the PIXIE, U and INISSIA machines as part of our continuous improvement process in order to optimize the piercing of our own capsules to ensure perfect extraction of the coffee. The changes were introduced with effect from July 2013.

Following recent concerns expressed by competitors regarding the compatibility of their capsules with these machines, and to demonstrate full transparency, Nespresso has decided to make public the technical specifications of the new blades (machine part # 749) in comparison with the old blades (machine part # 748), so they can assess the implications of this innovation for their generic capsules.
